

HIJIKI SEAWEED

Hijiki seaweed is a type of wild seaweed that grows on rocky coastlines around Japan, Korea, and China. *Hijiki Seaweed Salad*, a traditional Japanese nutritious dish using a type of wild seaweed, that is known for its many essential minerals and dietary fibre.

Cooked in a savoury sauce with other vegetables, like for example Edamame (young soya beans), this healthy salad has a delightful texture and homey flavour. Give it a try and you will come to appreciate this salad.
