

YELLOW TAIL (HAMACHI)

New in our assortment is the yellowtail kingfish from Japan. This ray-fined predator fish, which can reach almost 2 meters in length, is found in the wild in the warm waters of the Pacific.

Yellowtail has a medium to strong, distinct and pleasing flavor. With few bones it is adaptable to all kind of appetizing approaches. Yellowtail is superb for making sashimi. It is also very suitable to prepare on the grill, barbecuing and baking. Wrapping in foil helps to retain moisture when baking and barbecuing.
